

Zambia, a once prosperous African country, now has 73 per cent of its people below the poverty line and by the early 1990s, the country was included on the list of the least developed countries. Despite significant aid volumes and structural reforms, the country is getting deeper and deeper into poverty. What is the missing link between aid and positive change? Is the problem mainly that the volume of aid is not sufficient and, as is often heard, more of it would make a difference? Has the sluggish social and economic progress in Zambia been appropriately diagnosed and correct remedies and strategies prescribed? This book attempts to address these and related questions.
